August 31, 2012

Dear Jay:

I just wanted to follow up on our telephone conversation regarding the application of the apolic panels installed during the modernization of our Dairy Queen. It certainly has made a positive difference in the appearance of the building. Prior to the construction, our building was very difficult to see from the street. It just blended with the surrounding environment and landscaping.

Since we remodeled the outside of the building and put up the apolic panels along with the lighting, the building stands out to the public and is very eye catching. Our business has increased 19% so far this year. We have four stores, two treat stores and two food stores. This year they have all had increased sales but none of them compare to this store. There is a difference of 10% increase compared to the other stores. My Business Consultant and I both agree it has to be attributed to the picturesque view of the building.

Your company was very patient with us during the problems with the install. I want to thank you for this. So glad to see things have been resolved. Again, we are very happy with the product and would do it again. Hopefully, we will be able to remodel our other treat store within a couple years to match the Huber store.

Sincerely,

A handwritten signature in cursive script that reads 'Carol A. Brewer'.
